

LinAI Box Index Release Review

Report ID: RR-2026-0609

System: Knowledge Base Index Release Pipeline

Owner: platform-team

Background

On 2026-06-08, the operations team uploaded product guides, runbooks, and incident reports. Some users reported that new documents were not visible in answers on the next day.

Timeline

10:20 ingestion job started.

10:23 parser finished 18 files; 1 file had an empty body.

10:25 chunk stage skipped broken_export.md.

10:28 vector index write finished.

10:31 index version v20260608-2 was marked as published.

Diagnosis

E-503 is not always a query service failure.

It usually means the index build is not complete or the parsed result failed acceptance checks.

If source_nodes still come from an old index, check the index version loaded by query service.

Action Items

1. Check parser warnings before ingestion.
2. Keep table headers, row numbers, and business fields for CSV or Excel documents.
3. Every Document must include source, document_id, asset_type, and parser_version.
4. Rejected files must not enter the vector index.
